

# Parallel Lines

Complete  
line marking,  
floor and  
ground solutions

**Parallel Lines** is based in the West Midlands near Worcester, close to the M5.

With many years in the industry, we're known and trusted for our knowledge-driven approach and the quality of our installations.

Every company has Health & Safety requirements and we work with businesses all over the UK to alleviate their Health & Safety challenges and help them meet compliance.

- ≡ **Ground Preparation**
- ≡ **Indoor and Outdoor Line Marking**
- ≡ **Health and Safety Compliance**
- ≡ **Traffic Flow**
- ≡ **Reinstatement**

## A complete solution

We are here to help you efficiently manage the safe movement of vehicles, people and use of machinery, in all your public and employee areas.

Our directional line and ground marking service ensures your systems and commercial processes run smoothly and helps you comply with relevant Health & Safety legislation.

### An intelligent approach

Our fully trained team works alongside you to meet the real day to day needs of your environment and address any issues.

This brings you the best layout for (and the most ergonomic use of) your indoor and outdoor spaces.

### Clear communication

To ensure everything is delivered as agreed and meets all your expectations, we strive to maintain clear communication at all times.

### Understanding your needs

For example, if your factory or warehouse runs 24 hours a day, we will find an installation solution to minimise downtime.

Working to an agreed and staged timescale, we may complete the work in sections, overnight or during your quieter periods.

## Shot blasting for ground and floor preparation

Cleaning and removal of old concrete surfaces by shot blasting prepares the surface to be marked and increases the lifespan of the markings.

Using an integral vacuum, this dust free process removes old markings, can add grip and helps the markings to adhere effectively.

We also use scabbling, diamond grinding or planing to produce different textures or smooth out irregularities.

“ The project was efficiently carried out under difficult conditions with a high number of HGV movements on site. The co-operation and attention to detail was faultless. We have already recommended this top-class business. ”

“We don't cut corners!”

## Indoor Line Marking

This can consist of demarcation for machinery, walkways, storage and hatched areas.

This gives you clear area allocation for safe and efficient commercial operation and the movement of vehicles, machinery and people.

We use one and two pack epoxy line paint, with the option for slip-resistant coatings, to provide a high standard surface application for long-term use.

## Outdoor Line Marking

We work with businesses, councils, retail, leisure and business parks, industrial estates, railway stations and airports to provide safety, road and car park markings.

Different outdoor areas require different products and we use the materials that provide the best durability and longevity.

These may include hot thermoplastics, cold thermoplastics (MMA), and single or two pack epoxy line paint, all of which can have slip-resistant values (SRV) added to them, as well as other quality surface materials.

### Professional and super efficient.

From the moment I first contacted Parallel Lines I received excellent service. They did exactly what they promised, worked extremely hard and the final results are perfect. I cannot recommend this company highly enough!

# Hermes

## Delivering efficiency in the warehouse

Hermes Parcelnet Ltd is a major parcel distribution company operating in the UK & Europe.

### What was the nature of the work carried out by Parallel Lines?

We required a multitude of Health & Safety line marking throughout our 250,000sqft workplace. This consisted of coloured walkways with zebra crossings, fire exit routes, storage and holding bays as well as other compliance markings.

### Why did you choose Parallel Lines?

We had previously used other line marking companies and the lines didn't last long enough. At Hermes, we were looking for a better long-term solution, in both durability and cost.

Parallel Lines came out to see us and were not at all phased by the amount of work we required. Having walked around with us for some time asking the right questions, they understood our issues. They suggested doing some trials to see which system worked best. Parallel Lines provided the time and effort to give us solutions.

### What was your experience of working with Parallel Lines?

Their team has always put safety above all else. As a business Hermes has to respond to ever changing demands on their resource and this hasn't always been easy for them to carry out their work during our working hours. Our Rugby Super Hub is a really busy place, but they understand our environment and just get on with the job.

On occasion we have completely revamped our plans at the last moment and Parallel Lines were flexible to meet and exceed our demands. Nothing has been an issue and their office back-up has proved to be most useful when support has been needed.

### Would you recommend them?

Parallel Lines have been back here several times now and know the place well. The company is so impressed with their work and attitude they now fulfil contracts for Hermes throughout the UK. This requires them to travel from Scotland to Kent and in-between to service our network. It's never too much trouble for these guys. I believe their motto should be 'Consider it done!' and we look forward to a long and fruitful association as we look to the future.

## Leased Properties

Our full line marking and ground surface reinstatement service returns flooring to its original state after use.

This may be required prior to the end of a lease, when a rented unit is being returned to a landlord or when a unit requires unmarked, neutral flooring.

This typically reinstates factory and warehouse surfaces but is also required at other commercial locations.

This service can also improve and mark-out flooring in a newly leased property, prior to occupation.

“ The team completed the line marking in our warehouse, and we are very pleased with the work. It is so refreshing to work with a company that has such great customer care right at the heart of what they do. Good job! ”

# Birmingham Airport

## Placing safety first

BHX airport is a major international UK hub demanding quick turnaround to the highest quality.

### The challenge

Parallel Lines were asked to complete work at Birmingham Airport that included re-marking the external baggage-handling route to re-direct it, as well as indoor markings at the baggage collection points.

### How we helped

This work required airside insurance and parts of it to be completed at night, both of which were no problem for Parallel Lines who will always complete work to suit the needs of businesses.

### The result

Over the course of a week the indoor and outdoor work was completed to the high standard Parallel Lines are known to deliver. Additional work is to be completed at Birmingham Airport by Parallel Lines as part of their ongoing development of the terminal.

## Working with us

### When should you call us in?

Ideally, you will start the conversation with the Parallel Lines team as early as possible.

A typical lead-in time prior to work starting, is around two weeks.

For our repeat customers, we schedule all future updates to ensure their ground and line markings are maintained to an appropriate standard.

### Get connected

The highly knowledgeable Parallel Lines team are at the end of the phone to answer any questions you may have.

The office is staffed **9am to 5pm** each weekday, excluding statutory holidays, so do give us a call to discuss your requirements.

Please retain this brochure for future reference.
